

## Lighting

There are many ways to add lighting to your FACT ceilings. The tiles are field cuttable making our tiles compatible with just about any lighting out there. We do have one suggestion but not required. Dropping the light source to the bottom edge of the tile prevents hotspots on the tiles creating an evenly distributed light source on the tiles.

There are several manufacturers who work in grid solutions who can help you as well. A list can be found [here](#)

## Sprinklers

We realize that sprinklers are a necessary evil and part of almost every ceiling. Above are two suggestions for sprinklers when code requires that they drop to the lowest part of the tiles.

Designers should always consult **NFPA® 13** Standard for the Installation of Sprinkler Systems. This provides the minimum requirements for the design and installation of automatic fire sprinkler systems and exposure protection sprinkler systems.
